

Virginia e-Identity Initiatives

Dave Burhop
Deputy Commissioner/CIO
June 11, 2014

OnLine Consumer Protection

- Most individuals maintain online accounts with a multitude of vendors
- Each account is a potential weak point that could be exploited for identity theft
- CSDII will provide users the option of creating a unified, verified, highly secure online credential

Cross Sector Digital Identity Initiative (CSDII)

- Strengthens a low-end credential (i.e., a Facebook logon) using DMV and other third party attributes/multi-factor authentication
- Strengthened federated credential trusted by participating retailers, banks, healthcare orgs, governments, etc. (Single Sign-On model)
- Pilot funded by federal NSTIC grant and administered by the American Association of Motor Vehicle Administrators (AAMVA)
- NSTIC = enhanced privacy and security

CSDII (cont')

- Inova Health Systems is the first Relying Party in the pilot which begins the end of June 2014 for both patients and providers
- Participation is voluntary
- Consortium members include COV, AAMVA, Microsoft, CA Technologies, and BioSig-ID
- Digital credential to be eventually issued to citizens by Virginia DMV for a fee (covered initially by pilot funds)

Commonwealth Authentication Services (CAS)

- Enterprise identity system for use by all participating agencies to authenticate citizens desiring online COV services
- Utilizes DMV data for attribute verification
- Initially funded by CMS for state Medicaid Information Technology Architecture project (MITA) for greater operational efficiency and a reduction in fraud and abuse
- In production with Department of Social Services' CommonHelp Portal since 10/1/13
